

## Laragon 3.3 released - Automated SSL certificates (auto detect, generate and add to Trust Store) "WHY I CHOOSE LARAGON FOR LOCAL DEVELOPMENT"

A nice read about Laragon for Wordpress!

[Tutorial] Work with Laravel projects on github

Install MongoDB extension | Add another MySQL version | Add another PHP version

 **woenel** Dec 7, 2017, 2:06 PM | 1467 points

Laragon uses .dev TLD as local virtual host tld by default, so I guess it's better to change the default to something.

@woenel

You can change the default in **Hostname** setting on the **Preferences page**.

And yes, the Laragon should change the default to something else like **.test** or **.localhost** or **.dev** etc.

I use **.loc** which is short for **.localhost**.

I switched to .loc but since I am using laravel I discovered that laravel still points to .dev, anyone has run into this problem?

We are free to overcome that mess. Many ways:

1. Switch to Firefox.
2. Change the hostname format
3. Enable auto-generated SSL in Laragon

 **bantya** Dec 8, 2017, 2:24 PM | 🟡 6431 points

@nrmamax

For that, you may have to change your hosts file entries which has **.dev** TLD to **.loc** TLD and also do change that in your **{Laragon Root}\etc\apache2\sites-enabled** or **{Laragon Root}\etc\nginx\sites-enabled** files.

@leokhoa firefox nightly have it same as chrome, soon it will be in firefox:

 **David López** @lopezator · Jan 25, 2018  
@FirefoxNightly did you start to redirect .dev domains to https:// like @googlechrome @ChromiumDev or is just a weird issue only happening to me?

 **Firefox Nightly**  
@FirefoxNightly

Yes we did, this is because all browsers use the same HSTS preload list and we just updated that file from upstream in Nightly. The solution is probably to use .test instead [en.wikipedia.org/wiki/.test](https://en.wikipedia.org/wiki/.test)

@Samuell : Thanks for the heads-up. Laragon is now used **.oo** as default.

 **nrmamax** Feb 5, 2018, 9:54 AM | 🟡 2911 points

I changed from .oo to .dew

dewelopment 😊

@nermamax

This seems like a nice workaround which is quite readable.  
+1 for that 🙌
